My Aim

## To analyse the quantifiers

## My Aim

To analyse the quantifiers
(including their interactions with modals)

## My Aim

## To analyse the quantifiers

(including their interactions with modals) using the tools of proof theory

## My Aim

## To analyse the quantifiers

(including their interactions with modals) using the tools of proof theory in order to better understand quantification, existence and modality.

## My Plan

## Sequents \& Defining Rules

## Hypersequents \& Defining Rules

Quantification \& the Barcan Formula

## Positions \& Models

Consequences \& Questions

# SEQUENTS \& DEFINING RULES 

## Sequents

## $\Gamma \succ \Delta$

## Don't assert each element of $\Gamma$ and deny each element of $\Delta$.

## Structural Rules

## Identity: $A \succ A$

## Structural Rules

## Identity: $A \succ A$

Weakening: $\frac{\Gamma \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ \Delta}{\Gamma \succ A, \Delta}$

## Structural Rules

## Identity: $A \succ A$

Weakening: $\frac{\Gamma \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ \Delta}{\Gamma \succ A, \Delta}$
Contraction: $\frac{\Gamma, A, A \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ A, A, \Delta}{\Gamma \succ A, \Delta}$

## Structural Rules

## Identity: $A \succ A$

Weakening: $\frac{\Gamma \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ \Delta}{\Gamma \succ A, \Delta}$
Contraction: $\frac{\Gamma, A, A \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ A, A, \Delta}{\Gamma \succ A, \Delta}$

$$
\text { Cut: } \frac{\Gamma \succ A, \Delta \quad \Gamma, A \succ \Delta}{\Gamma \succ \Delta}
$$

## Structural Rules

## Identity: $A \succ A$

Weakening: $\frac{\Gamma \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ \Delta}{\Gamma \succ A, \Delta}$
Contraction: $\frac{\Gamma, A, A \succ \Delta}{\Gamma, A \succ \Delta} \quad \frac{\Gamma \succ A, A, \Delta}{\Gamma \succ A, \Delta}$

$$
\text { Cut: } \frac{\Gamma \succ A, \Delta \quad \Gamma, A \succ \Delta}{\Gamma \succ \Delta}
$$

Structural rules govern declarative sentences as such.

## Giving the Meaning of a Logical Constant

## With Left/Right rules?

$$
\frac{\Gamma, \mathrm{A}, \mathrm{~B} \succ \Delta}{\Gamma, \mathrm{~A} \wedge \mathrm{~B} \succ \Delta}[\wedge L] \quad \frac{\Gamma \succ \mathrm{A}, \Delta \quad \Gamma \succ \mathrm{~B}, \Delta}{\Gamma \succ \mathrm{~A} \wedge \mathrm{~B}, \Delta}[\wedge R]
$$

## Giving the Meaning of a Logical Constant

## With Left/Right rules?

$$
\begin{array}{lc}
\frac{\Gamma, \mathrm{A}, \mathrm{~B} \succ \Delta}{\Gamma, \mathrm{~A} \wedge \mathrm{~B} \succ \Delta}[\wedge L] & \frac{\Gamma \succ \mathrm{A}, \Delta \quad \Gamma \succ \mathrm{~B}, \Delta}{\Gamma \succ \mathrm{~A} \wedge \mathrm{~B}, \Delta}[\wedge R] \\
\frac{\Gamma, \mathrm{B} \succ \Delta}{\Gamma, \mathrm{~A} \text { tonk } \mathrm{B} \succ \Delta}[\text { tonkL }] & \frac{\Gamma \succ \mathrm{A}, \Delta}{\Gamma \succ \mathrm{~A} \text { tonk } \mathrm{B}, \Delta}[t \text { tonkR }]
\end{array}
$$

What is involved in going from $\mathcal{L}$ to $\mathcal{L}^{\prime}$ ?

## Use $\succ_{\mathcal{L}}$ to define $\succ_{\mathcal{L}^{\prime}}$.

What is involved in going from $\mathcal{L}$ to $\mathcal{L}^{\prime}$ ?

## Use $\succ_{\mathcal{L}}$ to define $\succ_{\mathcal{L}^{\prime}}$.

Desideratum \#1: $\succ_{\mathcal{L}^{\prime}}$ is conservative: $\left.\left(\succ_{\mathcal{L}^{\prime}}\right)\right|_{\mathcal{L}}$ is $\succ_{\mathcal{L}}$.

## What is involved in going from $\mathcal{L}$ to $\mathcal{L}^{\prime}$ ?

## Use $\succ_{\mathcal{L}}$ to define $\succ_{\mathcal{L}^{\prime}}$.

Desideratum \#1: $\succ_{\mathcal{L}^{\prime}}$ is conservative: $\left.\left(\succ_{\mathcal{L}^{\prime}}\right)\right|_{\mathcal{L}}$ is $\succ_{\mathcal{L}}$.

Desideratum \#2: Concepts are defined uniquely.

## A Defining Rule

$$
\frac{\Gamma, A, B \succ \Delta}{\Gamma, A \wedge B \succ \Delta}[\wedge D f]
$$

## A Defining Rule

$$
\frac{\Gamma, A, B \succ \Delta}{\Gamma, A \wedge B \succ \Delta}[\wedge D f]
$$

Fully specifies norms governing conjunctions on the left in terms of simpler vocabulary.

## A Defining Rule

$$
\frac{\Gamma, \mathrm{A}, \mathrm{~B} \succ \Delta}{\overline{\Gamma, A \wedge \mathrm{~B} \succ \Delta}}[\wedge D f]
$$

Fully specifies norms governing conjunctions on the left in terms of simpler vocabulary.

Identity and Cut determine the behaviour of conjunctions on the right.

## From $[\wedge D f]$ to $[\wedge L / R]$

## From $[\wedge D f]$ to $[\wedge L / R]$

From $[\wedge D f]$ to $[\wedge L / R]$

## From $[\wedge D f]$ to $[\wedge L / R]$

From $[\wedge D f]$ to $[\wedge L / R]$

$$
\frac{\Gamma \succ A, \Delta \quad \Gamma \succ \mathrm{~B}, \Delta}{\Gamma \succ \mathrm{~A} \wedge \mathrm{~B}, \Delta}[\wedge R]
$$

## And Back

$$
\frac{\frac{\mathrm{A} \succ \mathrm{~A} \quad \mathrm{~B} \succ \mathrm{~B}}{\mathrm{~A}, \mathrm{~B} \succ \mathrm{~A} \wedge \mathrm{~B}}[\wedge R] \Gamma, \mathrm{A} \wedge \mathrm{~B} \succ \Delta}{\Gamma, \mathrm{~A}, \mathrm{~B} \succ \Delta}
$$

# This works for more than the usual logical constants 

I want to see how this works for modal operators, and examine their interaction with the quantifiers.

Why this is important

Explaining why the modal operators have the logical properties they exhibit is an open question.
... possible worlds, in the sense of possible states of affairs are not really individuals (just as numbers are not really individuals).
To say that a state of affairs obtains is just to say that something is the case; to say that something is a possible state of affairs is just to say that something could be the case; and to say that something is the case 'in' a possible state of affairs is just to say that the thing in question would necessarily be the case if that state of affairs obtained, i.e. if something else were the case ... We understand 'truth in states of affairs' because we understand 'necessarily'; not vice versa. - "Worlds, Times and Selves" (1969)

## I agree with Prior...

... but a Priorean about possibility and worlds must address these issues:

## I agree with Prior...

... but a Priorean about possibility and worlds must address these issues:

- Why is it that modal concepts (which are conceptually prior to worlds) have a structure that fits possible worlds models?

## I agree with Prior...

... but a Priorean about possibility and worlds must address these issues:

- Why is it that modal concepts (which are conceptually prior to worlds) have a structure that fits possible worlds models?
- (Why does possibility distribute of disjunction, necessity over disjunction? Why do many modalities work in the way modelled by normal modal logics?)

## I agree with Prior...

... but a Priorean about possibility and worlds must address these issues:

- Why is it that modal concepts (which are conceptually prior to worlds) have a structure that fits possible worlds models?
- (Why does possibility distribute of disjunction, necessity over disjunction? Why do many modalities work in the way modelled by normal modal logics?)
- If modality is primitive we have no explanation.

## I agree with Prior...

... but a Priorean about possibility and worlds must address these issues:

- Why is it that modal concepts (which are conceptually prior to worlds) have a structure that fits possible worlds models?
- (Why does possibility distribute of disjunction, necessity over disjunction? Why do many modalities work in the way modelled by normal modal logics?)
- If modality is primitive we have no explanation.
- If modality is governed by the rules introduced here, then we can see why possible worlds are useful, and model the behaviour of modal concepts.

## HYPERSEQUENTS

\& DEFINING RULES

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$.

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

Could we avoid $p$ and $q$ ?

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

Could we avoid p and q ?
Consider any way it could go:

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

Could we avoid $p$ and $q$ ?
Consider any way it could go:
Since it's necessary that $p$, here we have $p$.

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

Could we avoid $p$ and $q$ ?
Consider any way it could go:
Since it's necessary that $p$, here we have $p$. Since it's necessary that $q$, here we have $q$.

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both p and q ?

Could we avoid $p$ and $q$ ?
Consider any way it could go:
Since it's necessary that $p$, here we have $p$. Since it's necessary that $q$, here we have $q$. So, we have both p and q .

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

Could we avoid $p$ and $q$ ?
Consider any way it could go:
Since it's necessary that $p$, here we have $p$. Since it's necessary that $q$, here we have $q$.

So, we have both $p$ and $q$.
So, no matter how things go, we have $p$ and $q$.

## Modal Reasoning involves Shifts

Suppose it's necessary that $p$ and necessary that $q$. Is it necessary that both $p$ and $q$ ?

Could we avoid $p$ and $q$ ?
Consider any way it could go:
Since it's necessary that $p$, here we have $p$. Since it's necessary that $q$, here we have $q$.

So, we have both $p$ and $q$.
So, no matter how things go, we have $p$ and $q$.
So the conjunction $p$ and $q$ is necessary.

## Exposing the Structure of that Deduction

## Exposing the Structure of that Deduction

## Exposing the Structure of that Deduction

## Exposing the Structure of that Deduction

## Hypersequents

$$
\square \mathrm{p}, \square \mathrm{q} \succ \quad \mid \quad \succ \mathrm{p} \wedge \mathrm{q}
$$

## Don't assert $\square \mathrm{p}$ and $\square \mathrm{q}$ in one 'zone' and deny $p \wedge q$ in another.

## Hypersequents

$$
\Gamma \succ \Delta \mid \Gamma^{\prime} \succ \Delta^{\prime}
$$

## Don't assert each member of $\Gamma$ and deny each member of $\Delta$ in one 'zone' and assert each member of $\Gamma^{\prime}$ and deny each member of $\Delta^{\prime}$ in another.

## Two Kinds of Zone Shift

INDICATIVE: suppose I'm wrong and that. . .
SUBJUNCTIVE: suppose things go differently. or had gone differently.

## Two Kinds of Zone Shift

## Two Kinds of Zone Shift

3 The New Wark ©imes.
KENNEDY IS KILLED BY SNIPER AS HE RIDES IN CAR IN DALLAS; JOHNSON SWORN IN ON PLANE

## - Suppose Oswald didn't shoot JFK.

## Two Kinds of Zone Shift

3 The New Wark ©imes.
KENNEDY IS KILLED BY SNIPER AS HE RIDES IN CAR IN DALLAS; JOHNSON SWORN IN ON PLANE

- Suppose Oswald didn't shoot JFK.
- Suppose Oswald hadn't shot JFK.

# STEREOSCOPIC VISION: 

Persons, Freedom, and

# Two Spaces of Material Inference 

Mark Lance<br>Georgetown University

W. Heath White<br>University of North Carolina at Wilmington

[^0]Freedom, oh freedom, well that's just some people talkin'.

- The Eagles

WHAT IS A person, as opposed to a non-person? One might begin to address the question by appealing to a second distinction: between agents, characterized by the ability to act freely and intentionally, and mere patients, caught up in events but in no sense authors of the happenings involving them. An alternative way to address the question appeals to a third distinction: between subjects - bearers of rights and responsibilities, commitments and entitlements, makers of claims, thinkers of thoughts, issuers of orders, and posers of questions - and mere objects, graspable or evaluable by subjects but not themselves graspers or evaluators.

We take it as a methodological point of departure that these three distinctions are largely coextensive, indeed coextensive in conceptually central cases. Granted, these distinctions can come apart. One might think that 'person' applies to anything that is worthy of a distinctive sort of moral respect and think this applicable to some fetuses or the deeply infirm elderly. Even if the particular respect due such beings is importantly different from "what we owe each other", such respect could still be thought to be of the kind distinctively due people, and think this even while holding that such people lack agentive or subjective capacity. Similarly, one might think dogs or various severely impaired humans to be attenuated subjects but not agents.

Without taking any particular stand on such examples, our methodological hypothesis is that such cases, if they exist, are understood as persons (agents, subjects) essentially by reference to paradigm cases and, indeed, to a single paradigm within which person/non-person, subject/object, and agent/patient are conceptually connected. ${ }^{1}$ Stated

1. For one detailed development of this sort of paradigm-riff structure, and a defense of the possibility of concepts essentially governed by such a structure, see Lance and Little (2004). Discussions with Hilda Lindeman have helped

## We are social creatures, who act on the basis of views

- disagreement: We disagree. We have reason to come to shared positions.

## We are social creatures, who act on the basis of views

- disagreement: We disagree. We have reason to come to shared positions.
- planning: We plan. We have reason to consider options (prospectively) or replay scenarios (retrospectively).

## We are social creatures, who act on the basis of views

- disagreement: We disagree. We have reason to come to shared positions.
- planning: We plan. We have reason to consider options (prospectively) or replay scenarios (retrospectively).
- We do many different and strange things in our messy zone-shifting practices, but we can isolate a particular convention or practice, idealise it, to see what we could do following those rules.

## We are social creatures, who act on the basis of views

- disagreement: We disagree. We have reason to come to shared positions.
- planning: We plan. We have reason to consider options (prospectively) or replay scenarios (retrospectively).
- We do many different and strange things in our messy zone-shifting practices, but we can isolate a particular convention or practice, idealise it, to see what we could do following those rules.
- (Analogies: $\forall x$ from first order logic and natural language's 'all.' Frictionless planes. etc.)

## Example Subjunctive Shifts

Oswald did shoot JFK, but suppose he hadn't? How would history have gone differently then?

## Example Subjunctive Shifts

Oswald did shoot JFK, but suppose he hadn't? How would history have gone differently then?
[oSk: ]@ | [@oSk : oSk]

## Example Subjunctive Shifts

Oswald did shoot JFK, but suppose he hadn't? How would history have gone differently then?
[oSk: ]@ | [@oSk : oSk]

We open up a zone for consideration, in which we deny oSk, while keeping track of the initial zone where we assert it.
(And if we like, we can assert @oSk in the zone under the counterfactual supposition.)

## Disagreement and Indicative Shifting

I think that Oswald shot JFK, but you don't.
I consider what it would mean for you to be right.
If you're right, Oswald actually didn't shoot JFK.

## Disagreement and Indicative Shifting

I think that Oswald shot JFK, but you don't.
I consider what it would mean for you to be right.
If you're right, Oswald actually didn't shoot JFK.

Epistemic alternatives interact differently with actuality.

## Disagreement and Indicative Shifting

I think that Oswald shot JFK, but you don't.
I consider what it would mean for you to be right.
If you're right, Oswald actually didn't shoot JFK.
Epistemic alternatives interact differently with actuality.

$$
[\mathrm{oSk}:]_{@} \Longrightarrow[: o S k]_{@}
$$

## Indicative Shifting

I think that Hesperus is Phosphorous, but I recognise that you don't. I don't take you to be inconsistent or misusing names.

## Indicative Shifting

I think that Hesperus is Phosphorous, but I recognise that you don't. I don't take you to be inconsistent or misusing names.

We don't have this:

$$
\mathrm{a}=\mathrm{b} \succ \Longrightarrow \mathrm{Fa} \succ \mathrm{Fb}
$$

It's coherent for you to assert $F a$ and deny $F b$ even if $I$ take it that $a=b$, and it's coherent for me to consider an alternative in which $a \neq b$ even if I don't agree.

## Idealised Indicative Shifts

- Let's take any zone found by indicatively shifting from here (or from anywhere from here, etc.) to be an alternative indicative context from any other context indicatively shifted from here.

## Idealised Indicative Shifts

- Let's take any zone found by indicatively shifting from here (or from anywhere from here, etc.) to be an alternative indicative context from any other context indicatively shifted from here.
- (And each are actual zones.)

## Idealised Indicative Shifts

- Let's take any zone found by indicatively shifting from here (or from anywhere from here, etc.) to be an alternative indicative context from any other context indicatively shifted from here.
- (And each are actual zones.)
- This is as liberal as possible about what counts as an alternative from any alternative zone.

## Idealised Indicative Shifts

- Let's take any zone found by indicatively shifting from here (or from anywhere from here, etc.) to be an alternative indicative context from any other context indicatively shifted from here.
- (And each are actual zones.)
- This is as liberal as possible about what counts as an alternative from any alternative zone.
- This gives us a motivation for a richer family of hypersequents.

## Two Dimensional Hypersequents

$$
\begin{array}{c|c|c|c|c}
X_{1}^{1} \succ_{@} Y_{1}^{1} & \mid & X_{2}^{1} \succ Y_{2}^{1} \mid & \cdots & X_{m_{1}}^{1} \succ Y_{m_{1}}^{1}
\end{array} \|
$$

## Two Dimensional Hypersequents

$$
\begin{array}{c|c|c|c|}
X_{1}^{1} \succ_{@} Y_{1}^{1} & \left|X_{2}^{1} \succ Y_{2}^{1}\right| & \cdots & X_{m_{1}}^{1} \succ Y_{m_{1}}^{1}
\end{array} \|
$$

Think of these as scorecards, keeping track of assertions and denials.

Notation

## $\mathcal{H}[\Gamma \succ \Delta]$

Notation

$$
\mathcal{H}\left[\Gamma^{\prime} \succ \Delta^{\prime}\right]
$$

## Notation

$$
\mathcal{H}\left[\Gamma^{\prime} \succ \Delta^{\prime}\right]
$$

$\mathcal{H}\left[\Gamma \succ \Delta \mid \Gamma^{\prime} \succ \Delta^{\prime}\right]$

## Notation

$$
\begin{gathered}
\mathcal{H}\left[\Gamma^{\prime} \succ \Delta^{\prime}\right] \\
\mathcal{H}\left[\Gamma \succ \Delta \mid \Gamma^{\prime} \succ \Delta^{\prime}\right] \\
\mathcal{H}\left[\Gamma \succ \Delta \| \Gamma^{\prime} \succ \Delta^{\prime}\right]
\end{gathered}
$$

Defining Rule for $\square$

$$
\frac{\mathcal{H}[\Gamma \succ \Delta \mid \succ A]}{\mathcal{H}[\Gamma \succ \square A, \Delta]}[\square D f]
$$

## Defining Rule for @

$$
\frac{\mathcal{H}\left[\Gamma, A \succ_{@} \Delta \mid \Gamma^{\prime} \succ \Delta^{\prime}\right]}{\mathcal{H}\left[\Gamma \succ_{@} \Delta \mid \Gamma^{\prime}, @ A \succ \Delta^{\prime}\right]}[@ D f]
$$

## Defining Rule for [e]

$$
\frac{\mathcal{H}\left[\Gamma \succ \Delta \| \succ_{@} A\right]}{\mathcal{H}[\Gamma \succ[\mathrm{e}] A, \Delta]}[[\mathrm{e}] D f]
$$

## Example Derivation

| $\frac{\succ \mid[\mathrm{e}] A \succ[\mathrm{e}] A}{\succ \mid[\mathrm{e}] A \succ \\| \succ_{@} A}[[e] D f$ |
| :---: |
|  |  |
|  |
| $\succ 1$ [e] $\mathrm{A} \succ$ [e]@A |
| $\succ$ ¢ $\quad \succ$ [e] $A \supset[\mathrm{e}] @ A$ |
|  |

## QUANTIFICATION

 \& THE BARCAN FORMULA
## The Standard Quantifier Rules

$$
\frac{\Gamma \succ A(n), \Delta}{\Gamma \succ(\forall x) A(x), \Delta}[\forall D f] \quad \frac{\Gamma, A(n) \succ \Delta}{\overline{\Gamma,(\exists x) A(x) \succ \Delta}}[\exists D f]
$$

## Deriving the Barcan Formula

$$
\begin{aligned}
& (\forall x) \square \mathrm{Fx}>(\forall \mathrm{x}) \square \mathrm{Fx} \\
& (\forall x) \square \mathrm{Fx}>\square \mathrm{Fn} \quad[\forall \mathrm{Df}]
\end{aligned}
$$

# Where the derivation breaks down 

$$
\begin{aligned}
& (\forall x) \square F x \succ(\forall x) \square F x \\
& (\forall x) \square \mathrm{Fx}>\square \mathrm{Fn}-[\forall \mathrm{Df}]
\end{aligned}
$$

# Where the derivation breaks down 

$$
\begin{aligned}
& (\forall x) \square F x \succ(\forall x) \square F x \\
& (\forall x) \square \mathrm{Fx}>\square \mathrm{Fn} \quad[\forall \mathrm{Df}]
\end{aligned}
$$

# Where the derivation breaks down 

$$
\begin{aligned}
& (\forall x) \square \mathrm{Fx}>(\forall \mathrm{x}) \square \mathrm{Fx} \\
& (\forall x) \square \mathrm{Fx}>\square \mathrm{Fn}-[\forall \mathrm{Df}] \\
& \overline{(\forall x) \square \mathrm{Fx}>\mid \quad \succ \mathrm{Fn}}{ }^{[\square \mathrm{Df}]}
\end{aligned}
$$

$$
\begin{aligned}
& >(\forall x) \square F x \supset \square(\forall x) F x[\supset D f]
\end{aligned}
$$

## Pro and Con attitudes to Terms

To rule a term in is to take it as suitable to substitute into a quantifier, i.e., to take the term to denote.

To rule a term out is to take it as unsuitable to substitute into a quantifier, i.e., to take the term to not denote.

## Pro and Con attitudes to Terms

To rule a term in is to take it as suitable to substitute into a quantifier, i.e., to take the term to denote.

To rule a term out is to take it as unsuitable to substitute into a quantifier, i.e., to take the term to not denote.

We add terms to the LHS and RHS of sequents $\Gamma \succ \Delta$.

## Structural Rules remain as before

Identity: $\mathrm{X}>\mathrm{X}$
Weakening: $\frac{\mathcal{H}[\Gamma \succ \Delta]}{\mathcal{H}[\Gamma, \mathrm{X} \succ \Delta]} \frac{\mathcal{H}[\Gamma \succ \Delta]}{\mathcal{H}[\Gamma \succ \mathrm{X}, \Delta]}$
Contraction: $\frac{\mathcal{H}[\Gamma, \mathrm{X}, \mathrm{X} \succ \Delta]}{\mathcal{H}[\Gamma, \mathrm{X} \succ \Delta]} \quad \frac{\mathcal{H}[\Gamma \succ \mathrm{X}, \mathrm{X}, \Delta]}{\mathcal{H}[\Gamma \succ \mathrm{X}, \Delta]}$
Cut: $\frac{\mathcal{H}[\Gamma \succ \mathrm{X}, \Delta] \mathcal{H}[\Gamma, \mathrm{X} \succ \Delta]}{\mathcal{H}[\Gamma \succ \Delta]}$
Here X is either a sentence or a term.

## ... and there are some more

$$
\begin{array}{ll}
\text { Ext. Weak.: } & \frac{\mathcal{H}[\Gamma \succ \Delta]}{\mathcal{H}\left[\Gamma \succ \Delta \mid \Gamma^{\prime} \succ \Delta^{\prime}\right]} \frac{\mathcal{H}[\Gamma \succ \Delta]}{\mathcal{H}\left[\Gamma \succ \Delta \| \Gamma^{\prime} \succ \Delta^{\prime}\right]} \\
\text { Ext. Contr:: } & \frac{\mathcal{H}[\Gamma \succ \Delta \mid \Gamma \succ \Delta]}{\mathcal{H}[\Gamma \succ \Delta]} \frac{\mathcal{H}[\mathcal{S} \| \mathcal{S}]}{\mathcal{H}[\mathcal{S}]}
\end{array}
$$

## Quantifier Rules, allowing for non-denoting terms

$$
\frac{\mathcal{H}[\Gamma, n \succ A(n), \Delta]}{\overline{\mathcal{H}}[\Gamma \succ(\forall x) A(x), \Delta]}[\forall D f] \quad \frac{\mathcal{H}[\Gamma, n, A(n) \succ \Delta]}{\overline{\mathcal{H}}[\Gamma,(\exists x) A(x) \succ \Delta]}[\exists D f]
$$

Now you can't derive the Barcan Formula

$$
(\forall x) \square F x>\square(\forall x) F x
$$

Now you can't derive the Barcan Formula
$(\forall x) \square \mathrm{Fx}>\square(\forall x) \mathrm{Fx} \mid \succ(\forall x) \mathrm{Fx}$

Now you can't derive the Barcan Formula
$(\forall x) \square \mathrm{Fx}>\square(\forall x) \mathrm{Fx} \mid \mathrm{b}>\mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}$

Now you can't derive the Barcan Formula
$(\forall x) \square \mathrm{Fx} \succ \mathrm{b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{b}>\mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}$

# Now you can't derive the Barcan Formula 

$$
\mathrm{a},(\forall \mathrm{x}) \square \mathrm{Fx} \succ \mathrm{~b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{a}, \mathrm{~b} \succ \mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}
$$

Now you can't derive the Barcan Formula

$$
\mathrm{a}, \square \mathrm{Fa},(\forall \mathrm{x}) \square \mathrm{Fx} \succ \mathrm{~b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{a}, \mathrm{~b} \succ \mathrm{Fb},(\forall \mathrm{x}) \mathrm{F} \mathrm{x}
$$

Now you can't derive the Barcan Formula

$$
\mathrm{a}, \mathrm{Fa}, \square \mathrm{Fa},(\forall x) \square \mathrm{Fx} \succ \mathrm{~b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{a}, \mathrm{~b}, \mathrm{Fa} \succ \mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}
$$

Now you can't derive the Barcan Formula
$\mathrm{a}, \mathrm{Fa}, \square \mathrm{Fa},(\forall \mathrm{x}) \square \mathrm{Fx} \succ \mathrm{b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{a}, \mathrm{b}, \mathrm{Fa} \succ \mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}$

## Now you can't derive the Barcan Formula

$\mathrm{a}, \mathrm{Fa}, \square \mathrm{Fa},(\forall \mathrm{x}) \square \mathrm{Fx} \succ \mathrm{b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{a}, \mathrm{b}, \mathrm{Fa} \succ \mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}$
This hypersequent is underivable...

## Now you can't derive the Barcan Formula

$\mathrm{a}, \mathrm{Fa}, \square \mathrm{Fa},(\forall \mathrm{x}) \square \mathrm{Fx} \succ \mathrm{b}, \mathrm{Fb}, \square(\forall \mathrm{x}) \mathrm{Fx} \mid \mathrm{a}, \mathrm{b}, \mathrm{Fa} \succ \mathrm{Fb},(\forall \mathrm{x}) \mathrm{Fx}$
This hypersequent is underivable...
...and it's fully refined.

# POSITIONS \& MODELS 

## Positions

- A finite position is an underivable hypersequent.

## Positions

- A finite position is an underivable hypersequent.
- An arbitrary position is a set (indicative alternatives) of sets (subjunctive alternatives) of pairs of sets of formulas or terms (components), where one component in each indicative alternative is marked with an @.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.
- For example:
- If $A \wedge B$ is in the lhs of a component, so are $A$ and $B$.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.
- For example:
- If $A \wedge B$ is in the lhs of a component, so are $A$ and $B$.
- If $A \wedge B$ is in the rhs of a component, so is one of $A$ and $B$.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.
- For example:
- If $A \wedge B$ is in the lhs of a component, so are $A$ and $B$.
- If $A \wedge B$ is in the rhs of a component, so is one of $A$ and $B$.
- If $(\forall x) \mathcal{A}(x)$ is in the lhs of a component, so is $\mathcal{A}(t)$ for every term $t$ in the LHS of that component.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.
- For example:
- If $A \wedge B$ is in the lhs of a component, so are $A$ and $B$.
- If $A \wedge B$ is in the rhs of a component, so is one of $A$ and $B$.
- If $(\forall x) \mathcal{A}(x)$ is in the lhs of a component, so is $\mathcal{A}(t)$ for every term $t$ in the LHS of that component.
- If $(\forall x) \mathcal{A}(x)$ is in the rhs of a component, so is $\mathcal{A}(t)$ for some term $t$ in the LHS of that component.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.
- For example:
- If $A \wedge B$ is in the lhs of a component, so are $A$ and $B$.
- If $A \wedge B$ is in the rhs of a component, so is one of $A$ and $B$.
- If $(\forall x) \mathcal{A}(x)$ is in the lhs of a component, so is $A(t)$ for every term $t$ in the LHS of that component.
- If $(\forall x) \mathcal{A}(x)$ is in the rhs of a component, so is $\mathcal{A}(t)$ for some term $t$ in the LHS of that component.
- If $\square A$ is in the lhs of a component, $A$ is in the lhs of every subjunctive alternative of that component.

## Fully Refined Positions

- A position fully refined if it is closed downard under the evaluation conditions for the connectives and modal operators.
- For example:
- If $A \wedge B$ is in the lhs of a component, so are $A$ and $B$.
- If $A \wedge B$ is in the rhs of a component, so is one of $A$ and $B$.
- If $(\forall x) \mathcal{A}(x)$ is in the lhs of a component, so is $\mathcal{A}(t)$ for every term $t$ in the LHS of that component.
- If $(\forall x) \mathcal{A}(x)$ is in the rhs of a component, so is $\boldsymbol{A}(t)$ for some term $t$ in the LHS of that component.
- If $\square A$ is in the lhs of a component, $A$ is in the lhs of every subjunctive alternative of that component.
- If $\square \mathcal{A}$ is in the RHS of a component, $\mathcal{A}$ is in the rhs of some subjunctive alternative of that component.

## Models

> Fully refinied positions are examples of models, with variable domains and the expected truth conditions for the connectives, quantifiers and modal operators.

## Soundness and Completeness

- Any derivable hypersequent (using Cut) holds in all models.

## Soundness and Completeness

- Any derivable hypersequent (using Cut) holds in all models.
- Any hypersequent that cannot be derived (without Cut) can be extended into a fully refined position.

## Soundness and Completeness

- Any derivable hypersequent (using Cut) holds in all models.
- Any hypersequent that cannot be derived (without Cut ) can be extended into a fully refined position.
- That fully refined position determines a model in which the hypersequent does not hold.

## Soundness and Completeness

- Any derivable hypersequent (using Cut) holds in all models.
- Any hypersequent that cannot be derived (without Cut ) can be extended into a fully refined position.
- That fully refined position determines a model in which the hypersequent does not hold.
- So the models are adequate for the logic.

## Soundness and Completeness

- Any derivable hypersequent (using Cut) holds in all models.
- Any hypersequent that cannot be derived (without Cut ) can be extended into a fully refined position.
- That fully refined position determines a model in which the hypersequent does not hold.
- So the models are adequate for the logic.
- And in the logic, the cut rule is admissible in the cut-free system.

## CONSEQUENCES \& QUESTIONS

## Principled, Motivated Ersatzism

The structure of modal concepts is explained in terms of the rules for their use.

## Principled, Motivated Ersatzism

The structure of modal concepts is explained in terms of the rules for their use.

Worlds (and their domains) are idealised positions.

## Coherent, Well Behaved Contingentism

Since positions can vary in what terms are ruled in or out, the domain of (inner) quantification varies in a well behaved manner.

## Inner and Outer Quantification

'Outer' quantification is an issue for contingentism.
On most approaches to contingentism, it can be defined.

## Inner and Outer Quantification

'Outer' quantification is an issue for contingentism.
On most approaches to contingentism, it can be defined. This proof theoretical semantics is no different in that regard....

## We have Outer Quantification

for which the substituted term need be defined in some zone.

## The Barcan Formula is Derivable

$$
\frac{\frac{\left(\forall^{\diamond} x\right) \square A(x) \succ\left(\forall^{\diamond} x\right) \square A(x)}{n \succ \mid\left(\forall^{\diamond} x\right) \square A(x) \succ \square A(n)}}{\frac{n \succ\left|\left(\forall^{\diamond} x\right) \square A(x) \succ\right|>A(n)}{\left[\forall^{\diamond} D f\right]}} \underset{\frac{\left(\forall^{\diamond} x\right) \square A(x) \succ \mid \succ\left(\forall^{\diamond} x\right) A(x)}{\left(\forall^{\diamond} x\right) \square A(x) \succ \square\left(\forall^{\diamond} x\right) A(x)}}{\left[\forall^{\diamond} D f\right]}[\square D f]
$$

## But we also have Way Out Quantification

$$
\frac{\mathcal{H}(\Gamma \succ \mathcal{A}(n), \Delta)}{\overline{\mathcal{H}}(\Gamma \succ(\Pi x) A(x), \Delta)}[\Pi D f] \quad \frac{\mathcal{H}(\Gamma, A(n) \succ \Delta)}{\overline{\mathcal{H}(\Gamma,(\Sigma x) A(x) \succ \Delta)}[\Sigma D f]}
$$

for which the term need not be defined anywhere.

Higher Order Contingentism?
$\forall X \square \phi(\mathrm{X}) \succ \square \forall \mathrm{X} \phi(\mathrm{X})$

## Higher Order Contingentism?

## $\forall X \square \phi(X) \succ \square \forall X \phi(X)$

What could it mean to rule a predicate in or out?

## THANK YOU!
